

# What 's On Your Hard Drive...

**Don't be a victim of illegal child porn.**

Pornographers hide their pics on unsuspecting hard drives, like yours. They may be using your space, right now, to remotely store their horrendous pictures and videos without fear of being caught.

Protect yourself and your reputation with VIPRO's Image Catalog Program. ICP will catalog every image on your hard drive and let you decide...

**Quarantine it!**

**Delete it!**

**Accept it!**

ICP runs quietly in the background. Once a week you see a listing of images that were added to your hard drive. Simply review the list; it takes just a fraction of your time.

**FAST... EASY... PEACE OF MIND**

ICP works as a silent partner with your virus software so you're never be surprised or embarrassed by what's been added to your hard drive.

## RIGHT NOW?

Your hard drive has a story to tell and it may not be the one you want! Millions of images are being stored forever, and anyone can see them. You may have a teen who enters unacceptable web sites when you're not around, or possibly you strolled off track a time or two yourself. Images were added to YOUR hard drive and you may have opened a doorway that's far worse.

**ONLY \$29.00**
